

# MAIN PROJECT - BANNER

---

## WEB SITE ONE – BANNER

### Requirements

Your CSS must be linked

Create a page that includes the Banner and Menu only

Name this page index.htm

The design for this site will be Jello therefore the page needs to be positioned correctly.

This banner will be included on every page of the final site

This page and the placeholder pages must be in a folder named imd100 (all lower case).

Try to use only three colors in your design. Two main colors and one accent

Cannot use black or dark gray as the background

### Due

In order to receive a grade for this assignment you need to have the pages on the server by the designated date and have completed all of the following requirements

### Title/ Logo

Create an image 980px wide by between 140px - 180px height that represents your Artist.

This image must include your Artist's name.

Place this image into the first page of your site

### Menu

Create a menu in xhtml. If you use images for your menu you must use CSS rollovers.

This menu can either sit on top of the banner image or a bit lower than the image.

The menu div should have a higher z-index than the banner image div.

Your menu must be a global menu that includes all the pages of your site. For the gallery one menu item is enough.

Menu must be styled for: link, visited and hover all must have the same size link. Link and visited should be the same color, hover needs to be a different color.

### Placeholder Pages

Create a placeholder page for each of the secondary pages that will be included in the site. You should have at least four placeholder pages.

Each page only has to have a name in the <body> that will identify the page.

### Upload

The pages and images to the server. Along with the CSS

Place in your directory named "imd100" (this page will replace the index.htm that you already have in this folder).

DO NOT REPLACE THE PORTSL PAGE.

### Test

Once all the pages are on the server, test to make sure that all of your links work.

YOU MUST BE ABLE TO ACCESS THIS PAGE VIA YOUR PORTFOLIO PAGE

If you did not complete the earlier assignment in which we set-up the server with directories, a portfolio page and placeholder pages you also need to complete that assignment in order to receive the grade for this assignment.
